transport: the Brenier map $T_t = (1-t)x_0 + t\,x_1$
moves each parcel; mass never crosses itself
density
x
$t = 0$
$t = 0.5$
$t = 1$
displacement convexity
diffusion is *steepest descent of entropy in the Wasserstein metric*
(Jordan–Kinderlehrer–Otto, 1998)
entropy (offset)
interpolation parameter t
heat flow: exponential decay
W_2 geodesic: convex in t
