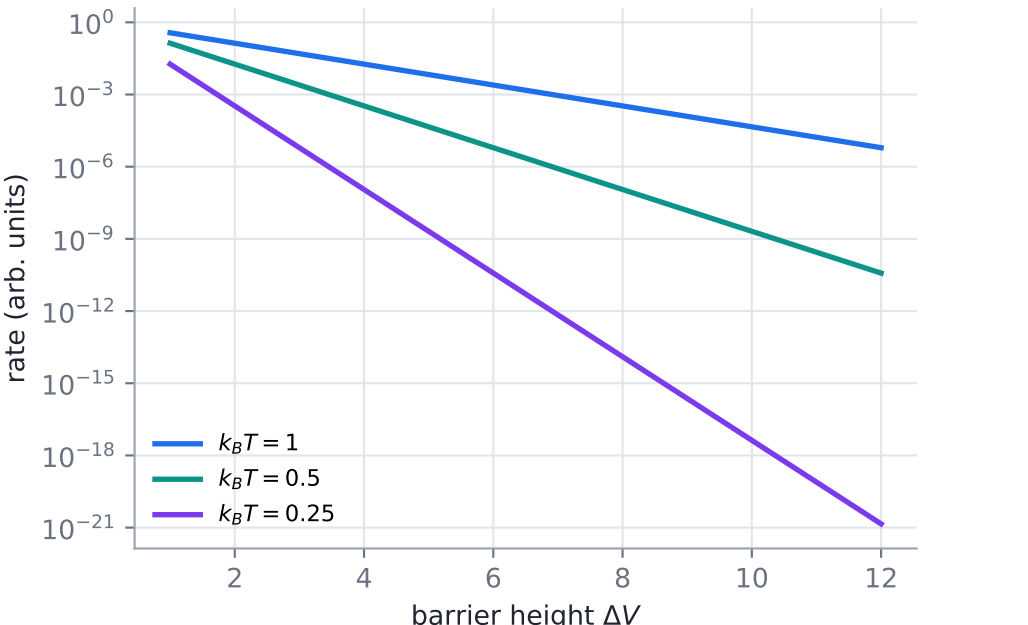
overdamped Fokker–Planck in a double well
probability leaks over the barrier: the escape problem
potential $V(x)$
density, 0 steps
density, 150 steps
density, 600 steps
density, 2500 steps
V (densities offset and scaled)
x



Kramers / Arrhenius law: $k \sim e^{-\Delta V/k_B T}$
the same exponential governs reaction rates, nucleation,
battery ageing and protein folding
rate (arb. units)
barrier height ΔV
$k_B T = 1$
$k_B T = 0.5$
$k_B T = 0.25$
