Order parameter dies at T_c
order parameter m
temperature T/T_c
$m \sim (T_c - T)^{1/2}$
($\beta = \frac{1}{2}$, mean field)
disordered
Susceptibility diverges: $\chi \propto (T - T_c)^{-\gamma}$
χ
$T - T_c$
$\gamma = 1$
(mean field)
slope $-\gamma = -1$
the system is infinitely
soft to a nudge here
Hysteresis: two states remember the path
response m
applied field h
field increasing
field decreasing
